Vision

Expand our planet.
Expand our future.

Creating a new era where human beings can live in space

Due to the rapid expansion of space infrastructure around Earth there is a tangible need for space resources which will appear in the next decade

Cislunar Economy

Issues for Space Resource Utilization

1 Governance

2 Technology

3 Finance

Recent progress in Japan

Japan's national space policy commits to encouraging the space resources-related industry and to contributing to fair governance rules on space resources development

- Space resource utilization is added to the schedule of Japanese space policy (2016)
- The Diet passed a collateral resolution about space resources (2016)
- Minister of State for Space Policy, Yosuke Tsuruho expressed the government's intent to engage actively in space resources issues

ispace Contributions

- 1 Governance** ▶ Providing commercial insight
- 2 Technology** ▶ Creating access to space resources for all via Japanese technology
- 3 Finance** ▶ Generating efficient business models
